

Muhammad Saim

SUMMARY

I'm a self-taught and highly passionate Full Stack Developer with solid grip on the MERN stack, building creative and real-world web applications from scratch. Whether it's crafting eye-catching frontends in React or building solid backends in Node.js/Express, I enjoy solving problems with clean, efficient code. My journey started with HTML, CSS, JavaScript, and Python, and grew into full-stack development, GSAP based animations, and WordPress/WooCommerce eCommerce systems. Alongside coding, I've mastered the world of AI and automation - from building smart chatbots with Botpress, to designing n8n workflows, generating AI-based content, videos, and experimenting with generative AI tools. Recently, I even built a fully functional eCommerce platform without writing a single line of code, using a Replit AI agent - proving my command over no-code and zero-code tools as well. Whether it's through code or creativity, I believe in getting things done. I haven't worked officially in a company yet, but I've built realworld projects, automated workflows, and polished my skills with deep focus and consistency. I'm also familiar with the basics of networking, cybersecurity, and penetration testing, giving me a well-rounded technical perspective. Always ready to explore new tools, face new challenges, and keep growing - because for me, learning never stops.

Education

AI-Huda Public High School | Ahmedpur East, Punjab Pakistan

Computer , Matric

Apr.2023 - Apr.2024

I studied Matric from alhuda public High school then I take interest in computere science and started self learning.

Projects

E-Commerce Platform

I build this App in these technologies **React, Nodejs, ExpressJS**.

Description:

Built a modern eCommerce web application with a fully functional product catalog, cart, checkout system, admin dashboard, and payment integration. Features include user authentication, wishlist, flash sales, order tracking, and real-time cart updates. Implemented a responsive UI with React, state management via TanStack Query, backend with Express.js and PostgreSQL, and server-side security with JWT, AES-256 encryption, and role-based access. Also added advanced features like search suggestions, coupon logic, analytics dashboard, and mobile-optimized layout.

CV Builder App With Preview

I build this App in these technologies **HTML, CSS, JavaScript**

Description:

Developed a modern, interactive CV builder tailored for software engineers with real-time live preview, auto-saving via browser storage, PDF export support, and a clean two-panel layout featuring a dynamic form and responsive preview panel.
